

Combining these additional services with over 20 years of successful outside and heavyweight air cargo transportation experience, Volga-Dnepr now offers customers a comprehensive door-to-door service incorporating multi-modal transportation schemes that often also involve road, rail and ocean logistics.

The launch of the Engineering & Logistics Center underpins the competitive advantages of Volga-Dnepr Group:

- All-purpose and mutually complementing aircraft fleet
- Worldwide network of air routes and offices
- Bonded Carrier status
- Own aircraft fleet
- Own insurance operator
- Unique technical expertise and a professional team with more than 20 years of proven operational experience in complex air cargo transportation projects

Today, ELC's work is coordinated by three special offices in the Volga-Dnepr Group network located in the USA, UK and Russia, which are operational on a 24/7/365 basis.

# Comprehensive logistics solutions

[www.volga-dnepr.com](http://www.volga-dnepr.com)

A global market need for comprehensive logistics services to support the transportation of outsize and heavy cargo to any destination in the world did not go unnoticed by Volga-Dnepr Group's business professionals.

## CHARTER +

In 2009, to meet this requirement, the company launched a series of innovative solutions for the worldwide market via the newly-created Volga-Dnepr Engineering & Logistics Center (ELC).

Every solution offered by ELC's team of experts is designed to support and enhance the core services offered by Volga-Dnepr Group, notably air cargo charter operations using AN-124-100s, IL-76TD-90VDs, and Boeing 747 freighters as well as scheduled cargo services with Boeing 747Fs on AirBridgeCargo's route network and that of its partner airlines.

Additional services now available through ELC include:

- Provision of ground equipment at airports for on/offloading
- Cargo trucking to/from airports, including obtaining all necessary permits
- Technical assessment of cargo and its preparation for shipping
- Design and manufacture of special transportation equipment for complex projects
- Advice on suitable transportation methods for specific cargo consignments, including packing and cargo preparation recommendations
- Assistance with customs clearance and insurance
- Use of smaller contracted aircraft from partner Airlines (AN-12, AN-26, AN-72) to offer the best value for customers whose shipments are best suited to these aircraft types
